

Our Plan

Is to identify the market of data services for all customers, whether the customer is business or residential. To provide the complete solution for all of your telecommunication and state-of-the-art technology needs. Our approach focuses on defining each customer's unique needs. As a private company we provide our customers with the same quantity of services as their local telephone or cable company with superior quality of service and competitive prices. Cablecom presently services approximately 10,000 customers in Chicago. Customers will see savings of up to 40% on their data service bills.

Our Savings

Customers will see savings of up to 40% on their data and VoIP service bills. Cablecom provides Symmetrical Broadband Business Packages for both large and small businesses. These packages are designed and configured for current high speed internet access technology.

About Us

Cablecom is a fully licensed electrical contracting and engineering firm, with over 30 years of experience in the design and construction of electrical and telecommunications systems. The company specializes in voice, data, video, and security systems. Cablecom is an experienced telecommunications contractor and has a secure MBE and WBE affiliation in the Chicago market. As a Qualified Contractor with the Chicago Public Schools (CPS), Cablecom has designed and installed Hybrid and Wireless LAN/WAN systems. Designs of this type have been utilized by major companies in all facets of telecommunications; Voice, Data, Video, and Security. Cablecom is also a registered competitive local exchange carrier (CLEC) in Illinois.

Cablecom's history dates back to 1974 when it pioneered and built the first franchised Cable TV system in the Chicago market. Cablecom became Chicago's leading Cable TV distributor, building a subscriber base of over 85,000 users. Since, then, the company has completed electrical and telecommunication systems in some of Chicago's most prestigious buildings from Lake Point Towers and the Mercantile Exchange to the John Hancock Center and the IBM building.

Value to the customer...

More bandwidth

We believe it is safe to say that many business and residential consumers are dissatisfied with their telecom service providers. For business customers, wait times for the installation of broadband service via what we call "T-1" lines are excessive and the service is costly. Business customers located in buildings with insufficient internal wiring are hard-pressed to find a high-speed data solution. Imagine trying to run a business without high-speed internet access! As to residential consumers, more of them are "cutting the cord" and looking for alternative solutions to their telephone service needs.

High Speed Wireless

Cablecom provides rapidly deployable wireless data services using a sophisticated fixed microwave network. With a line of sight connection, high-speed service can be installed and working in less than five business days. This service delivers 1.0 Mb and more, at a significant savings compared to the fully loaded costs of installing and leasing a T-1.

VOiP

Cablecom began offering VoIP service when the benefits to customers became obvious - cost reduction and flexibility. Cablecom saves money on long distance, local long distance, and local calling. Companies with multiple locations become much more portable for accessing any employees and the phone itself can be used on any high speed data line. Billing is centralized and Cablecom customers receive a consolidated invoice with detail for all lines used.

Surveillance & Security

Wireless IP surveillance and security has sky rocketed because it is less costly than traditional systems. Cablecom's system provides excellent flexibility and owners of businesses can access their system from locations that provide internet access.
